

# Download Combustion Measurements

This volume presents papers in the fields of measurements in combustion systems, velocity measurements by laser anemometry, particle and flow field holography, temperature measurements by light ...The book begins with an introduction to the general problems of making measurements in high temperature and a presentation of chemically reacting flow systems. Complete combustion analysis platform covering pressure and optical signal measurement and conditioning, data acquisition and online and offline data evaluation - all crank angle based and cycle per cycle!AVL PLUrea™ is a system solution for dynamic urea consumption measurement in SCR system development and application for diesel engines.
