Books Advanced Search Today's Deals New Releases Amazon Charts Best Sellers & More The Globe & Mail Best Sellers New York Times Best Sellers The course provides a comprehensive and systematic review of the methods used for measurement, correction, and control of the beam dynamics in modern particle accelerators. By way of illustration, theoretical principles are applied in the evaluation of experimental data obtained at various accelerator laboratories including CERN, BNL, DESY, SLAC, IUCF, KEK, LBNL, and FNAL. The intended audience includes graduate students and engineers or operators working in accelerator-related fields. Measurement and Control of Charged Particle Beams. This advanced textbook and reference is the first comprehensive and systematic review of all methods used for the measurement, correction, and control of the beam dynamics of modern particle accelerators. Based on material presented in several lectures at the US Particle Accelerator School, ... Get this from a library! Measurement and control of charged particle beams.
